

Old Mutual Capital Growth

Fund Commentary

Domestic equity markets finished the quarter ending 31 May 2011 in positive territory with the FTSE/JSE Top40 Index up 1.76%. The quarter started poorly with equity markets falling 6.7% in the first half of March following the Japan earthquake before strong global macro data drove the market into positive territory for the month. Despite a tippy-topsy April and May equity markets ended the quarter positive.

Capital Growth delivered a return of 0.6% for the quarter, which is equivalent to 37% equity market participation. Effective equity exposure during the quarter averaged 25%. At sector level the Industrial and the Financial sectors contributed to the positive equity performance with returns of 8.0% and 6.0% respectively. The Resource sector was a drag on equity market performance with a return of -4.9%.

Through its design and asset allocation, Capital Growth aims to deliver consistent stable returns by protecting capital when equity markets fall and participating in equity rallies. Looking ahead, we believe that Capital Growth remains well positioned to deliver attractive real returns over the long-term, while ensuring the protection of clients' capital.
