

FUND INFORMATION

RISK PROFILE

RECOMMENDED MINIMUM INVESTMENT TERM

FUND OBJECTIVE

The fund aims to offer a combination of capital growth and high income yields. Capital growth is primarily achieved by actively taking advantage of interest rate cycles.

WHO IS THIS FUND FOR?

This fund is suited to astute investors who have a particular view on relative asset class performance. The investor understands the impact of the interest rate cycle and accepts this risk in exchange for moderate long-term growth potential.

INVESTMENT MANDATE

The fund invests across the full spectrum of the yield curve. It invests in public and private sector bonds and deposits, with at least 50% invested in bonds with an effective government guarantee.

REGULATION 28 COMPLIANCE

The fund is not required to be Regulation 28 compliant in terms of its Deed, but the fund manager is mandated to comply with Regulation 28 on a day-to-day basis.

FUND COMMENTARY as at 31/03/2019

Our main concern with regard to the SA bond market remains the strong link between lacklustre economic growth and the lack of fiscal consolidation – or more specifically, Government's rising debt burden as a consequence of the lack of fiscal consolidation. This debt burden continues to threaten the country's sovereign risk profile and places pressure on domestic funding costs. In addition, the risk of a failed economic recovery has certainly not dissipated. Even when accounting for the rebound in GDP growth of 2.6% and 1.4% in the third and fourth quarters of 2018, respectively, the underlying economy remains structurally weak, with growth for the 2018 calendar year an uninspiring 0.8%. A weak economy calls into question the quality of tax revenue collections and the health of the tax base, which, in turn, keep the

risk of a budget deficit overrun at elevated levels. The financial burden of poorly managed state-owned enterprises on state finances has reached a point where the delivery of a credible National Budget was near impossible in the absence of substantial remedial action. The proverbial chickens (mainly in the form of Eskom) have come home to roost and this required more than the usual liquidity provision. Addressing solvency is an entirely different matter – requiring more than simply kicking the can down the road via more liquidity bail-outs.

On the monetary policy front, we maintain our view that, following the repo rate increase in November 2018, the South African Reserve Bank will remain hostage to the opposing forces of a lacklustre economic growth outlook and limited upside risks to inflation in light of the strong disinflationary environment. For now, this suggests a stable policy path combined with a central bank that will keep warning of their response to the threat of higher inflation outcomes. The underlying domestic disinflationary trend and the risks to the global growth outlook should not be ignored. On balance, the risk to the stable repo rate outlook is still skewed to the upside, but our base case remains for a stable repo rate.

The recent bull rally, combined with renewed concerns about the fiscal state, convinced us to reduce risk into bouts of market strength. In doing that, we endeavour to strike a balance between avoiding capital loss (in the case of a market sell-off) and losing out on the accrual offered by a steeply sloped yield curve. We have also considered the fact that nominal bonds are currently trading at an attractive real yield of around 4%. So, while our broad interest rate investment strategy remains defensive, the modified duration variance of -0.60 is still some way off the maximum allowed position of -1.0. Real yields have retraced sufficiently to entice us to close some of our underweight positions.

The fund is defensively positioned with an underweight modified duration tilt of 0.6 relative to the All Bond Index's modified duration of 7.3. This is the result of a smaller holding of nominal bonds with a term to maturity of 25 years and longer relative to the benchmark. The underweight position at the back end of the yield curve is offset by a small cash holding, some exposure to high-yielding, stable fixed rate bank deposits and short- to medium-dated non-government nominal bonds.

OTHER INVESTMENT CONSIDERATIONS

MINIMUM INVESTMENTS:

- Monthly: R500
- Lump sum: R10 000
- Ad hoc: R500

INITIAL CHARGES (Incl. VAT)*:

There is no initial administration charge for investment transactions of R500 and above. Initial adviser fee will be between 0% and 3.45%. Investment transactions below the R500 fund minimum incur a 2.30% administration charge.

* Please note: Initial charges do not apply to the Class B funds.

ONGOING

	Class R	Class B1*
Annual service fees (excl. VAT)	0.75%	0.60%

* Please note: The Class B1 Fund is only available through investment platforms such as Old Mutual Wealth.

The fee is accrued daily and paid to the management company on a monthly basis. Other charges incurred by the fund, and deducted from its portfolio, are included in the TER. A portion of Old Mutual Unit Trusts' annual service fees may be paid to administration platforms.

TAX REFERENCE NUMBER: 9002/001/60/1

ISIN CODES:	Class R	ZAE000020699
	Class B1	ZAE000048138

Total Expenses (Incl. Annual Service Fee)	36 Months		12 Months	
	Class R	Class B1*	Class R	Class B1*
Total Expense Ratio (TER) Incl. VAT	0.89%	0.72%	0.89%	0.72%
Transaction Cost (TC)	0.01%	0.01%	0.01%	0.01%
Total Investment Charge	0.90%	0.73%	0.90%	0.73%

* Please note: The Class B1 Fund is only available through investment platforms such as Old Mutual Wealth.

TER is a historic measure of the impact the deduction of management and operating costs has on a fund's value. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER, which includes the annual service fee, may not necessarily be an accurate indication of future TERs. Transaction Cost (TC) is a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

Funds are also available via Old Mutual Wealth and MAX Investments.

FUTUREGROWTH

/ ASSET MANAGEMENT

We aim to treat our clients fairly by giving you the information you need in as simple a way as possible, to enable you to make informed decisions about your investments.

- We believe in the value of sound advice and so recommend that you consult a financial planner before buying or selling unit trusts. You may, however, buy and sell without the help of a financial planner. If you do use a planner, we remind you that they are entitled to certain negotiable planner fees or commissions.
- You should ideally see unit trusts as a medium- to long-term investment. The fluctuations of particular investment strategies affect how a fund performs. Your fund value may go up or down. Therefore, we cannot guarantee the investment capital or return of your investment. How a fund has performed in the past does not necessarily indicate how it will perform in the future.
- The fund fees and costs that we charge for managing your investment are disclosed in this Minimum Disclosure Document (MDD) and in the table of fees and charges, both of which are available on our public website or from our contact centre.
- Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained, free of charge, from Old Mutual Unit Trust Managers (RF) (Pty) Ltd, from our public website at www.omut.co.za or our contact centre on 0860 234 234.
- Our cut-off time for client instructions (e.g. buying and selling) is at 15:00 each working day for all our funds, except the Money Market Funds, the price of which is set at 13:00. These are also the times we value our funds to determine the daily ruling price (other than at month-end when we value the Old Mutual Index Funds and Old Mutual Multi-Managers Fund of Funds range at 17:00 close). Daily prices are available on the public website and in the media.
- Unit trusts are traded at ruling prices, may borrow to fund client disinvestments and may engage in scrip lending. The daily ruling price is based on the current market value of the fund's assets plus income minus expenses (NAV of the portfolio) divided by the number of units on issue.
- The Net Asset Value to Net Asset Value figures are used for the performance calculations. The performance quoted is for a lump sum investment. The performance calculation includes income distributions prior to the deduction of taxes and distributions are reinvested on the ex-dividend date. Performances may differ as a result of actual initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Annualised returns are the weighted average compound growth rates over the performance period measured. Performances are in ZAR and as at 31 March 2019.
