SAMPLE AND METHODOLOGY

The OMSIM study focuses on employed South Africans aged 18 to 65, earning a monthly income of R8 000 or more

Age, personal income, gender and population group were all quota controlled, and the data reweighted according to the income and demographic profiles of working South Africans aged 18 – 65 years as per the UNISA Bureau of Market Research

RESEARCH OBJECTIVE

The Old Mutual Savings and Investment Monitor (OMSIM) measures the financial pulse of working South Africans, uncovering their financial attitudes, perceptions, and behaviour.

Championing the
**Financial well-being
of Consumers.**

THE INSIGHTS REVEAL

A Nation of Divergent Financial Realities

The latest 2026 study showcases a nation that **demonstrates improved country sentiment and forward-looking positivity, but underlying this optimism is a widening divide.** Middle to affluent consumers are prospering and in a stronger financial position relative to a year ago, while lower-income people face rising financial stress, debt reliance, and insecurity.

Overall, **current realities reveal that many working South Africans remain financially fragile.** Challenges with debt, expense control, savings preservation, and long-term financial preparedness, suggest there is a clear gap between intention and meaningful action.

ECONOMY AND PERSONAL SENTIMENT

Optimism in economy and personal outlook is driven by the anticipation of income growth, particularly amongst working South Africans earning R30 000 p.m. or more

OLD MUTUAL
SAVINGS & INVESTMENT
MONITOR

CONFIDENCE IN THE SOUTH AFRICA ECONOMY

Close to 1 in 2 (**47%**) working South Africans' note **confidence in the South African economy**, at its highest level since 2020, and on an upward trajectory over the last 3 years.

All cohorts share this increased confidence, except for 50+ years where confidence in the economy has fallen. Consumers specifically cite anticipated opportunities, faith in the government, investor confidence, and a stronger rand currency as drivers for their more positive sentiment.

Drivers of high confidence

- Economy slowly improving / opportunities
- Faith in government to turn things around
- SA attractive to investors
- Currency stronger

Drivers of low confidence

- Poor governance/ corruption
- High cost of living/inflation
- High levels of Unemployment
- Global tensions / war etc.

CONFIDENCE IN THE SA ECONOMY

Demographic TRENDS

50+ year olds are the least confident, and buck the trend with a decline in 2026.

% AGREE (slightly or strongly)	2019	2020	2021	2022	2023	2024	2025	2026

Female	45%	28%	26%	26%	22%	28%	34%	41%

FINANCIAL OUTLOOK

At a personal level, **high levels of positive future outlook remain visible**, reflective of a resilient nation, where 75% of working South Africans believe that their personal financial situation will improve in the next six months.

Whilst stable at an overall level, we see **heightened positivity amongst higher income consumers** earning R30 000+ p.m. (from 72% to 78% in the latest read), vs no real shift amongst those earning less than R30 000 p.m. (76% to 74%)

As before, **youthful optimism** is strongest, with 90% of 18 to 29 year olds believing their financial situation will improve the next 6 months.

Older South Africans however, are the least optimistic at 53%.

FORWARD LOOKING **OPTIMISM IS UNDIMMED**

LEAD DRIVER FOR
**POSITIVE
FINANCIAL
OUTLOOK**

**Expecting
improved income**

% expect financial situation in the next 6 months to improve / get better

CHANGES IN PERSONAL EARNINGS

We see a **continued recovery in personal income levels**, where 50% note earning more income than they did a year ago (a 6% increase since 2025).

The improvement is most evident among 30– 49-year-olds as well as

higher income earners earning R30 000+ p.m., where a sharp rise from 49% to 60% is evident.

SANDWICH GENERATION

The incidence of those in the 'Sandwich Generation' remains stable over the years. There is also no shift across income groups.

"Sandwich Generation"

are those who are supporting not only children but also parents and/or other older dependents

	TOTAL 2026	R8 000 – R14 999	R15 000 – R29 999	R30 000 – R59 999	R60 000 – R119 999	18 – 29 YEARS	30 – 49 YEARS	50+ YEARS	MALE	FEMALE

No	57%	52%	58%	59%	62%	57%	53%	68%	58%	55%

FINANCIAL STRESS

Financial Stress, however, has now nudged upward in the latest study, after seeing a recovery trend since 2022 - with lower income consumers feeling considerably more financially vulnerable than a year ago.

OLD MUTUAL
SAVINGS & INVESTMENT
MONITOR

FINANCIAL STRESS

Whilst we see positive movements in many of the financial behavioural indicators, of concern is that the improvement in Financial stress since 2022 has paused, where **those who are considerably financially stressed have edged up slightly from 38% to 40% in 2026**

The dip is driven **by people earning less than R30 000 p.m.** (where we see a notable increase from 41% to 47%).

in addition to financial stress being markedly lower, **among those earning R30 000+ p.m., a converse trend is observed where stress continues to edge down** from 31% in 2025 and 27% in the latest study (and down by 15% since 2023).

Financial stress levels also increases more notably for younger people aged 18 to 29 olds (+6) as well as older consumers aged 50+ (+5).

LEVEL OF FINANCIAL STRESS

THE LEADING DRIVER OF FINANCIAL STRESS IS CONSUMERS' ABILITY TO MANAGE THEIR DEBT.

DEBT MANAGEMENT

Lower income South Africans are increasingly debt distressed, with everyday financial pressures leave little room to absorb life's costs.

OLDMUTUAL
SAVINGS & INVESTMENT
MONITOR

WORRY ABOUT DEBT

Overall, working South Africans are worrying more about debt – Those who worry frequently rising steadily since 2024 (43% to 47% to 50%),

particularly amongst those earning less than R30 000 p.m. (where we see an increase from 47% in 2024 to 56% in 2026).

Amongst those earning R30 000+ p.m., debt worry remains stable at 39% since 2025.

	TOTAL	R8 000 - R14 999	R15 000 - R29 999	R30 000 - R59 999	R60 000 - R119 999	18 – 29 YEARS	30 – 49 YEARS	50+ YEARS	MALE	FEMALE
Unweighted Numbers	1 519	467	443	445	164	376	818	325	834	685
% Always or often worry about debt	50%	64%	48%	43%	28%	49%	53%	43%	46%	56%

CREDIT TYPES CURRENTLY HELD

Underlying this worry, is a **significant increase in current credit vehicles held** – across the income cohorts. The incidence of store card holding has spiked notably since 2025 (from 61% to 68%), while credit cards revert back to pre-2025 levels.

	2024	2025	2026
Unweighted Numbers	1 508	1 621	1 519
(Bank) Credit card	73%	65%	73%
Store account cards/shop accounts	62%	61%	68%
Car finance	40%	36%	42%
Buy Now Pay Later			39%
Lay by facility	29%	29%	32%
Revolving credit or overdraft	27%	25%	28%
Home loan/mortgage bond	31%	23%	27%
HP/hire purchase/instalment sale	12%	12%	18%
ANY personal loan inc mobile money	57%	54%	64%

PERSONAL LOANS

Personal loans (of any kind) **also climbed sharply from 54% to 64% in 2026**, including informal loans. Worrying is that loans held from mashonisias/loan sharks are also on the rise (from 12% to 19%). Furthermore, consumers have increasingly borrowed money from their circles of trust, namely from family and friends at 28% (+10) , as well as from stokvels at 16% (+5).

	2024	2025	2026
Unweighted Numbers	1 508	1 621	1 519
Personal loan from a financial institution	43%	38%	43%
Personal loan from a friend/family member	15%	18%	28%
Personal loan from a micro lender/mashonisa	13%	12%	19%
Personal loan from your stokvel	11%	11%	16%
ANY personal loan inc mobile money	57%	54%	64%

* Family loans wording refined - this may account for some of the increase

APPLICATION OF PERSONAL LOAN FUNDS

As regards key drivers for taking out personal loans, about 3 in 10 note this is required for household maintenance and everyday expenses, whilst 1 in 5 loan holders borrow to pay off other debt – these are indicative of being more functional rather than discretionary. We do also see 1 in 5 needing loans to purchase furniture and appliances.

62% of those with any type of personal loan said it was taken out for an unplanned expense

Base: have a loan of any type from FSP, or friends and family, or from employer or microlender (n=937); mentions 10%+

Main reason for taking this loan / these personal loans? What was / is the money used for?

DEBT REPAYMENT TRENDS

A slight uptick in falling behind on repayments is noted overall.

24% of working South Africans note they have fallen behind on a personal loan repayment - more prevalent amongst lower income consumers (R8000 to R30 000)

HOUSEHOLD FINANCES PAST YEAR

DEBT REPAYMENT TRENDS

Among 18-to-29-year-olds we see a fall back on store card and credit card repayments.

Among R8 000 – R14 999 consumers falling behind on debt repayments have worsened - in particular, on store cards, stokvel loans and home rentals/home loans.

HOUSEHOLD FINANCES PAST YEAR

R8 000 - R14 999	2024	2025	2026
Unweighted Numbers	478	491	467
Fallen Behind On Rent Or Home Loan Payments	20%	15%	22%

Fallen Behind On Rent Or Home Loan Payments	16%	12%	16%
Fallen Behind Of Credit Card Payments	18%	19%	25%
Fallen Behind On Store Card Payments	20%	22%	28%

DEBT AS A FINANCIAL PRIORITY

Given the growing debt pressure, **debt management continues to be a top set financial priority** – ranking 3rd overall amongst working South Africans.

Paying off debt has become a less prominent financial priority among consumers earning R30 000+ p.m., dropping from 2nd place to 5th place.

Ranked as 1st, 2nd or 3rd most important

Q: Please rank the following from 1 to 8 where 1 = NUMBER ONE PRIORITY for now right now"

DEBT MANAGEMENT

On debt management, we do observe some positive financially responsible behaviour, where **almost 4 in 10 South Africans have addressed a debt challenge by approaching creditors to make a payment arrangement** (+6 since 2025)

Debt management	TOTAL	R8 000 - R14 999	R15 000 - R29 999	R30 000 - R59 999	R60 000 - R119 999	18 – 29 YEARS	30 – 49 YEARS	50+ YEARS	MALE	FEMALE

Taken out a loan to consolidate debt	16%	19%	18%	9%	23%	15%	18%	13%	19%	12%
Applied for formal debt review/debt counselling	14%	14%	15%	10%	16%	17%	12%	15%	13%	14%
None of the above	44%	35%	45%	55%	47%	31%	42%	62%	47%	41%

CREDIT SCORES

Credit score monitoring remains fairly steady, with a small uptick.

Recent checking of scores is highest among R60 000+. We believe this may indicate a desire by this cohort to take up more credit, which they appear to have done this year

CHECKED CREDIT SCORE?	TOTAL	R8 000 - R14 999	R15 000 - R29 999	R30 000 - R59 999	R60 000 - R119 999	18 – 29 YEARS	30 – 49 YEARS	50+ YEARS	MALE	FEMALE

No, I have never checked or obtained my credit score	13%	15%	14%	11%	4%	10%	9%	26%	15%	11%

MANAGING EXPENSES

Working South Africans continue to struggle with boundaries of spend, as overspending increases in the last year.

OLD MUTUAL
SAVINGS & INVESTMENT
MONITOR

CUTTING EXPENSES

Given the debt pressure, working South Africans' financial flexibility is compromised, and managing expenses becomes a struggle. Expense management therefore remains a key financial priority amongst working South Africans. As before, expense coping mechanisms include downgrading a TV streaming service (29%), switching to cheaper supermarket brands (27%), cutting back on domestic help (24%), moving to cheaper cellphone/data plan (24%), and making cheaper living arrangements (23%).

*** NETT of: downscaling or moving to cheaper rental or moving back home or in with others to share costs

** NETT of: moving children to cheaper school or tertiary institution or putting older children's tertiary plans on hold

BUDGET MANAGEMENT

While 62% of consumers claim that cutting back on spending is their first response when money is tight, 73% continue to overspend, highlighting a clear gap between intention and behaviour. Worrying is a +10% amongst those aged 50+.

Several reasons were cited for the overspend - the rising cost of living (such as electricity, fuel, food and utilities), unplanned expenses as life happens, the desire to self indulge, the lure of promotions, the responsibility to assist family and extended family, as well as impulse purchasing.

WHEN MONEY IS TIGHT

REASONS FOR OVERSPENDING

MOVING MONEY AROUND TO AVOID OR DELAY DEBIT ORDERS

Another coping mechanism is navigating around debit order payments. When prompted, Almost 1 in 2 working South Africans say they transfer money between accounts or refrain from depositing money to avoid or delay debit order deductions – 1 in 5 do this regularly. Lower earners (R8 000 – R14 999) and younger (18 – 29 years) are the most likely to do this.

Reasons for this behaviour is mixed, but all are born out of affordability pressures / cash flow squeeze.

	TOTAL	R8 000 - R14 999	R15 000 - R29 999	R30 000 - R59 999	R60 000 - R119 999	18 – 29 YEARS	30 – 49 YEARS	50+ YEARS	MALE	FEMALE
	1 519	467	443	445	164	376	818	325	834	685
Yes (regularly or occasionally)	46%	53%	49%	38%	33%	56%	47%	35%	45%	47%
Yes, regularly	21%	26%	21%	15%	18%	22%	23%	13%	21%	22%
Yes, occasionally	25%	28%	27%	23%	15%	33%	24%	22%	25%	26%
Rarely	21%	17%	22%	24%	22%	26%	20%	20%	18%	24%
Never	33%	29%	29%	38%	45%	19%	33%	45%	36%	29%

GAMBLING AS A MEANS TO MANAGE EXPENSES

Of concern too is that still **42% of working South Africans acknowledge they gamble frequently hoping to make money that can cover some of their expenses/debt**, markedly more prevalent among lower earners R8k to R15k (52%).

More concerning, is the significant increase in working South Africans who find themselves in financial difficulty as a result of gambling (22%, up from 12% in 2025).

53%
of working South
Africans gamble

ALTERNATE SOURCES OF INCOME

Working South Africans are increasingly tapping into supplementary income streams such as Poly-Jobbing, earning rental income and social media income to expand their wallets.

OLD MUTUAL
SAVINGS & INVESTMENT
MONITOR

FINANCIAL PRIORITIES

Financial priorities remain unchanged with Income security a lead priority for working South Africans (highest at 67% amongst those earning R8 000 to R14 999). Whilst personal income levels have improved, **vulnerability persists**.

53%

constantly worried about losing income (as before, highest among those earning R8k to R15k) (67%)

1 in 2

consumers note they will have money left to last only 3 months or less if they lose their income

Poly-Jobbers

To minimise the risk of income loss, consumers continue to flex their hustle in various ways to ensure alternate income streams. **"Poly-Jobbers" shift up from 57% to 61%.**

This continues to be dialled up among those aged 18 to 29 (75%), though we also note increased traction amongst those aged 50+ (from 31% in 2025 to 41%), driving up the overall incidence.

6 in 10 indicate that their side hustle income has grown in the last year, whilst two thirds of Poly-Jobbers note this hustle income makes up a notable part of their earnings

Poly-Jobbers | side-hustling, freelancing and doing after hours work in addition to their regular job

ENTREPRENEURSHIP

Female	44%	53%	48%	57%	56%	63%

SOCIAL MEDIA ACTIVITY

Interestingly 2026 witnesses **a sharp increase in employed South Africans who earn at least some income through social media**, from 37% to 51%, and for 27% (up by +11), this is a significant part of their income.

This increase is evident across all demographics, and, as before, those earning on social media is highest among younger South Africans (62% of 18 – 29 year olds vs 31% of those aged 50+ years.)

% Active on this platform	89% (-4)	88% (-3)	76% (+3)	69% (-)	62% (-1)	50% (+1)
% Earn ANY Income on this platform (Base = total sample)	25% (+2)	36% (+12)	22% (+7)	23% (+6)	18% (+6)	15% (+6)
% Earn SIGNIFICANT Income on this platform (Base = total sample)	12% (+2)	14% (+6)	9% (+3)	8% (+2)	6% (+2)	6% (+3)

TAPPING INTO REWARDS

The many rewards programs available to working South Africans can and do provide relief when money is tight.

Some 62% have taken advantage of loyalty points / rewards (down from 67% in 2025) and for a third of working South Africans these are more than just a nice to have.

Younger consumers feel the savings offered are a particularly significant part of their finances.

- Critically important, I would struggle to make ends meet without these / Important / the savings are significant to me
- Nice to have / use for those little treats and extras
- Not important / hardly use / only when I remember
- Have not taken advantage of loyalty points in the last year

	TOTAL 2026	R8 000 - R14 999	R15 000 - R29 999	R30 000 - R59 999	R60 000 - R119 999	18 – 29 YEARS	30 – 49 YEARS	50+ YEARS	MALE	FEMALE

UNBANKED CASH AS A PORTION OF TOTAL SAVINGS

2026 sees an increase not only in incidence of holding unbanked cash savings, but also an increase in those reporting that these cash savings constitute most or a significant part of their total savings. This particularly true of lower earners.

UNBANKED CASH SAVINGS | MOTIVATION

Convenience and accessibility remain the primary motivation

STOKVELS

Stokvel usage among the core market (black) continues to rise from 53% to 56% (and up by +8% since 2023). The upward shift is driven by black South Africans earning R30 000+ (50% to 62%). The number of stokvels held is down, but average monthly contributions are unchanged.

56%

Belong to
a stokvel

% OF MEMBERS WHO BELONG
TO MORE THAN ONE STOKVEL

AVERAGE MONTHLY CONTRIBUTION

STOKVEL MEMBERSHIP DRIVERS

The in-built discipline of the stokvel system remains the main reason for membership, followed by affordability.

The social element is a key driver amongst those earning R30 000+ (43%), as well as the flexibility it offers (38%).

Access to loans is less important but still cited by 1 in 4 members.

In 2026, 72% of stokvels surveyed grant loans to members.

SAVINGS GOALS

Although consumers aspire to balance short- and long-term savings goals, actual savings behaviour remains predominantly short-term focused.

SPECIFIC SAVINGS GOALS

Retirement remains the number one savings goal (30%) among working South Africans, followed by saving for children's education (27%).

This is closely followed by saving for their family's future (26%), saving for emergencies (24%), saving to grow wealth (23%), saving to pay off debt (22%), and saving for a car (22%).

PROGRESS ON SAVINGS GOALS

Progress has been made especially as regards saving for family's future, children's education and saving to pay off debt.

Q: Different people have different goals and savings needs. Are you saving towards a particular savings need/s or goals?

INVESTMENT **CONFIDENCE** AND INVESTMENT **RISK**

Investment confidence continues to slowly improve, together with a strong overall appetite for investment risk as consumers seek higher returns.

OLD MUTUAL
SAVINGS & INVESTMENT
MONITOR

CONFIDENCE IN INVESTMENT AND SAVINGS DECISION MAKING

Working South Africans' confidence levels continue to trend upward, with higher earners continuing to be significantly more confident in their savings and investment decision making capabilities than their lower earning counterparts are. Contrary to the overall trend, 50+ year olds show lower levels of confidence in the latest read.

10-point scale where: 1= Not at all Confident and 10 = Extremely Confident

DRIVERS OF SAVING AND INVESTMENT CONFIDENCE:

INVESTMENT RISK INCLINATION

At an overall level, **propensity for investment risk remains high at 51% who are willing to take above average or significant investment risk**. However, closer inspection reveals a sharp increase in willingness to take risk among Gen Y (from 51% to 58%) and those earning R30 000+ (from 49% to 58%)

Those aged 50+ years remain the most risk averse cohort, notably more so in the current study (with those taking average to no risk increasing from 61% to 71%)

Those wanting to take on more risk do so to benefit from potential higher returns. Those not willing cite global and current economic volatility and not willing to chance losing money.

SHIFTS IN RISK INCLINATION

Why **LESS** willing to take on risk

- **Current economy and global instability / environment is too volatile**
- **Fear of losing money**
- **Risk adverse psyche / don't like the uncertainty / too stressful**
- Too many responsibilities / can't afford to / others rely on me
- Have lost money before / past experience
- Fear of scams/ concern re security of online platforms
- Approaching retirement / getting older so need to be more careful

Why **MORE** willing to take on risk

- **Want to make more / want higher returns / to improve my situation**
- **Risk mindset, YOLO, don't want to regret not giving it a go**
- Motivated by family obligations / retirement or long-term security
- I know more about risk and investing now / have the confidence and experience
- External influence / markets have done well lately / markets not as volatile (R60k+)
- Can afford the knock if things go south (R60k+)

ADVICE AND FINANCIAL ADVISERS

OLD MUTUAL
SAVINGS & INVESTMENT
MONITOR

FINANCIAL ADVISERS

As regards Financial advice, 4 in 10 note they have a financial adviser, down from 2025. The incidence is significantly lower amongst those earning R8k to R15k.

Amongst older South Africans, we see a declining trend in adviser usage from 45% in 2024 to 42% in 2025 to 37% in the latest read. Older consumers using word of mouth, information from FSP (brochures) and call centres – the latter 2 increasing amongst this cohort in the last year.

Furthermore, we see a marked decline amongst those earning R30 000+ where adviser usage has dropped by -11 to 50%, and those unsure whom to turn to for financial advice also on the rise.

SUMMARY AND CONCLUSION

INSIGHTS SUMMARY

- Overall, working South Africans continue to be resilient reflecting confidence in the future despite their current-day financial vulnerabilities.
- While rising incomes are contributing toward a more positive future outlook, financial stress has turned upward again, especially among lower-income households who are facing growing debt pressures and rising financial tensions.
- We see a widening gap amongst working South Africans, with higher-income households improving, as lower-income households face growing financial strain.
- Spending discipline remains a concern, with evidence of increased overspending, even as consumers attempt to manage down their spend and pursue alternative income streams.
- Similarly, whilst they demonstrate strong intent to save, the drawdown of savings, and reliance on informal shorter-term savings vehicles signals a consumer that is battling to effectively manage their finances.
- This shorter-term mindset impedes their long-term financial security, including retirement preparedness which remains sub-optimal.

IN CONCLUSION

The latest study reveals a nation with divergent financial realities. We observe a contrast between future optimism and current financial pressures, between good intentions and meaningful action, and between lower-income consumers who are struggling, and more affluent consumers who are thriving.

Consumers though are determined, with strong intention to improve their finances, despite the financial challenges they face. Yet, whilst some progress is seen, the heavy reliance on debt, eroding savings, low levels of long term preparedness, and lack of structured financial guidance, points to an inability to meaningfully activate, especially amongst the lower income earners. This reaffirms a nation that is financially fragile.

To bridge these gaps and ensure financial progress from intention to action, aligning current with future state, and help narrowing the income divide, consumers need accessible, relevant, and practical financial guidance and know-how that empowers them to make informed decisions at every money moment, building sustainable financial wellbeing over time.
